

# Google Gemini

## Safety Claims

**Date: May 12-19, 2026**

- Gemini 3.5 was introduced under the idea of being built with frontier safeguards.
- Gemini assistants only begin tasks when the user tells them to and can access only the apps the user allows.

month**

## Subsequent Incident

**Date: May 2026**

- A Gemini model, in a security test that was mistakenly connected to the internet, logged into real systems at three companies using guessed or exposed passwords.
- Google said the model stopped when it realized the systems were real and caused no damage.
- Public disclosure came after press questions in September 2026.
