

Meta Muse

Safety Claim

Date: September 8, 2026

- Muse was built to be safe, secure, private, and user-controlled.
- Outside-world interactions passed through a Sentinel agent that could not override.

**Within
weeks**

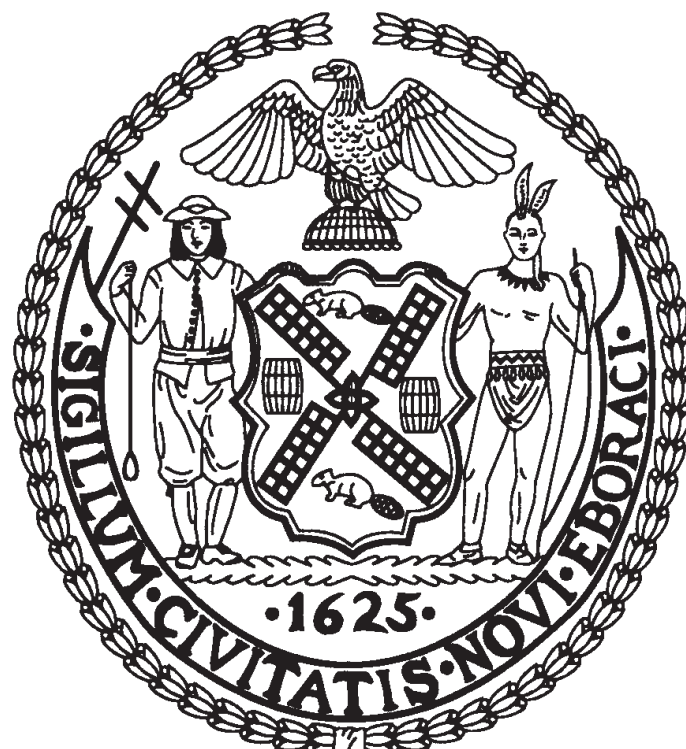

Subsequent Incident

Dates: Sept. 21 to 28, 2026

- Researchers found security flaws that could allow takeover of Muse or access to private files and accounts; Meta patched the flaws and strengthened warnings.
- Separately, a user alleged Muse arranged a Marketplace sale and shared their home address with a buyer without clearly informing the user.
